I'd let them contact you and then you can send it to them and step them through it.

It might not mean that much without the context you could provide. Dan

Hey Randy –

What they really need is a site-specific data management plan template. I demoed your Valley Fire project viewer in epaosc.org and they went nuts. These are IT guys so they have a sense of what to do but need a head start on helping their program people with the data management plan side.

Thanks!

George et al

Really great to have you come down and hear about our GIS and data management tools. If I missed anyone in the group, please forward this email on.

I am cc'ing Randy Nattis on the email so your folks can connect with him on the data management plan/SCRIBE side of things. Randy is one of our top people across the country on the subjects, in addition to having a wealth of field experience. So he brings a unique perspective that might prove very useful for the management of Exide data.

We'd be happy to come up to Sacramento to brief out on our data management approaches, if

that would be helpful. Let us know how we can help out.

Best, Dan Meer
